

LAYER CONFIGURATION

BEZELS CONFIGURATION

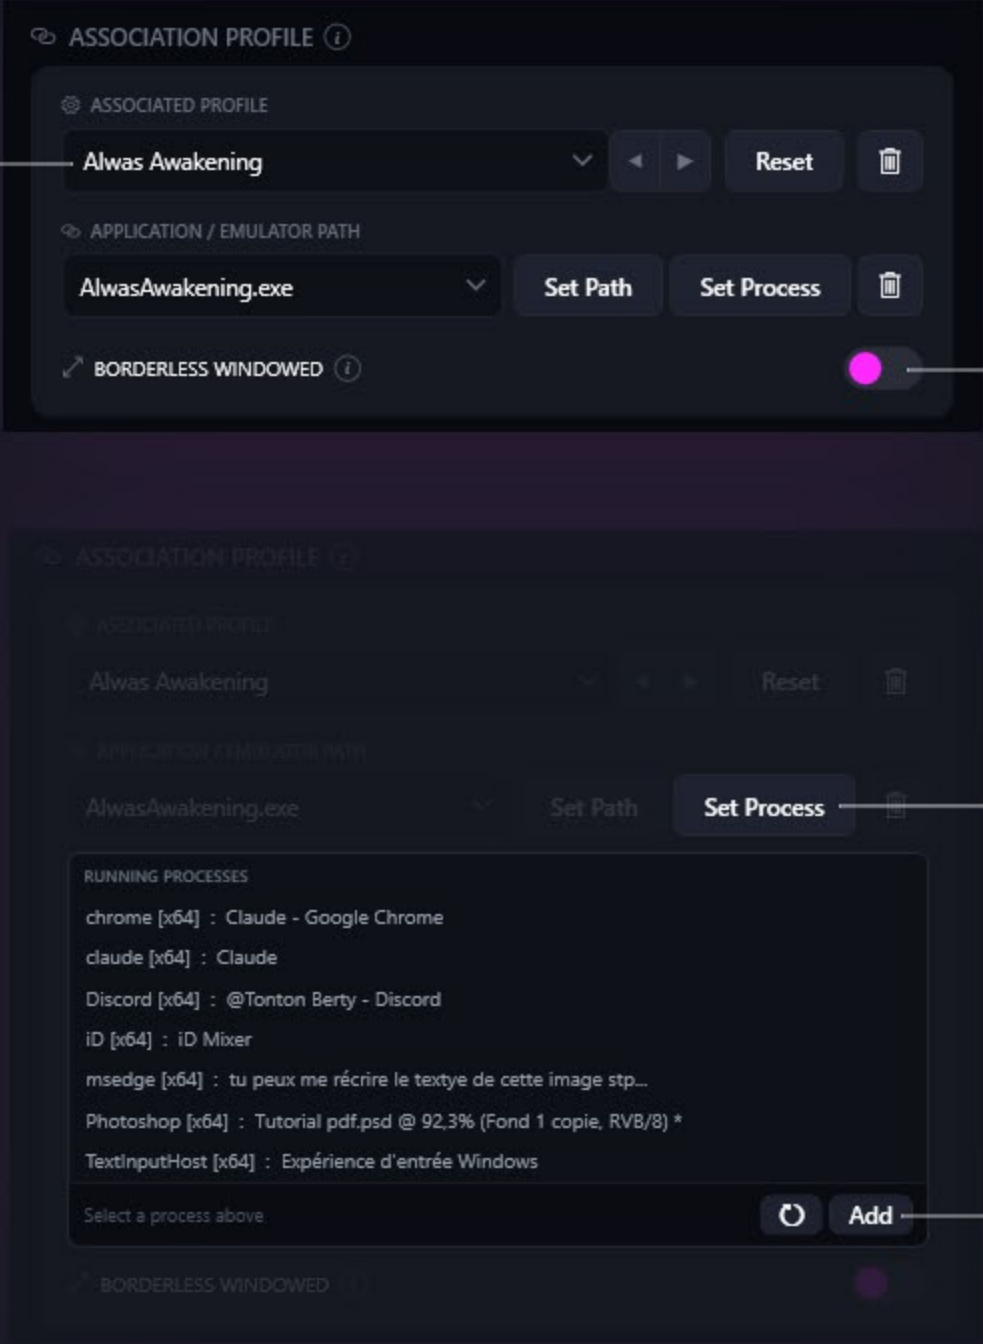

Bezels are PNG images placed over the screen to frame the game image, like a real arcade or TV cabinet border. The image must match your screen resolution (e.g. 1920x1080 for a 1080p monitor). Use a PNG with transparent areas where the game should show through. Set the folder containing your bezel PNGs using the **Set** button, use arrows buttons to cycle through available bezels. You can also assign a hotkey in the Shortcuts tab to switch bezels without opening S4W.

DYNAMICS SCANLINES GENERATOR

The scanlines generator lets you simulate the retro CRT screen effect, with separate controls for horizontal and vertical lines. For each axis, you can enable or disable the scanlines using the toggle button. The **Gap** sets the spacing between each line in pixels. The **Thickness** adjusts the line width, and the **Opacity** controls the intensity of the effect via a slider ranging from 0 to 100%.

First, give your profile a name, this will unlock the rest of the section
Desktop profile is reserved for displaying scanlines directly over Windows (no .exe needed)

CREATING PROFILES

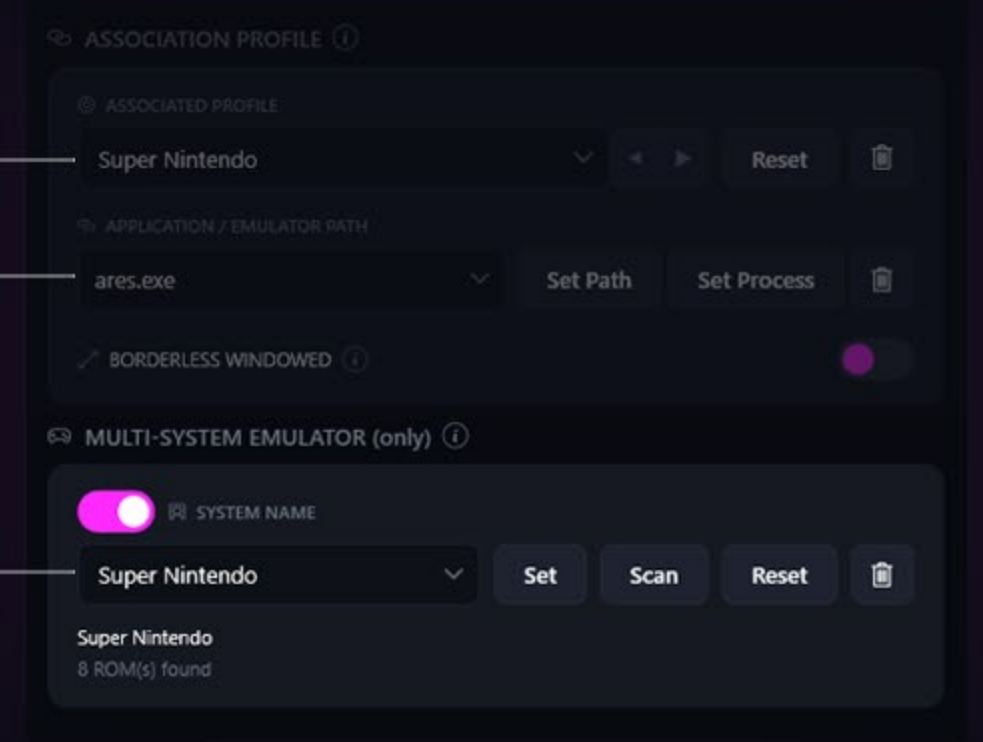

Use **Set Path** button to browse the .exe, to link a game or emulator to a profile. or use **Set Process** button to pick from a list of currently running processes. Hit **Reset** to restore all default settings (scanlines, CRT and bezel), or the trash button to permanently delete the profile. Enable **Borderless Windowed** if your game runs in exclusive fullscreen and hides the S4W interface, this keeps you in control and lets you tweak your effects in real time while playing. Set your game in windowed mode before enabling this option.

SET PROCESS

Click **Set Process** to display the list of active processes and add the desired one via the **Add** button. Click **Set Process** again to toggle the process list off

Add the selected process via the **Add** button.

ENTER PROFILE NAME
SET MULTI-SYSTEM EMULATOR (.exe)
SET and SCAN SYSTEM ROMS FOLDER

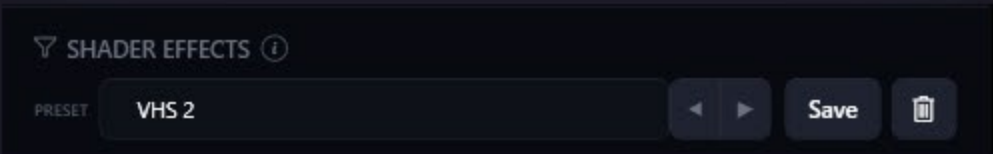

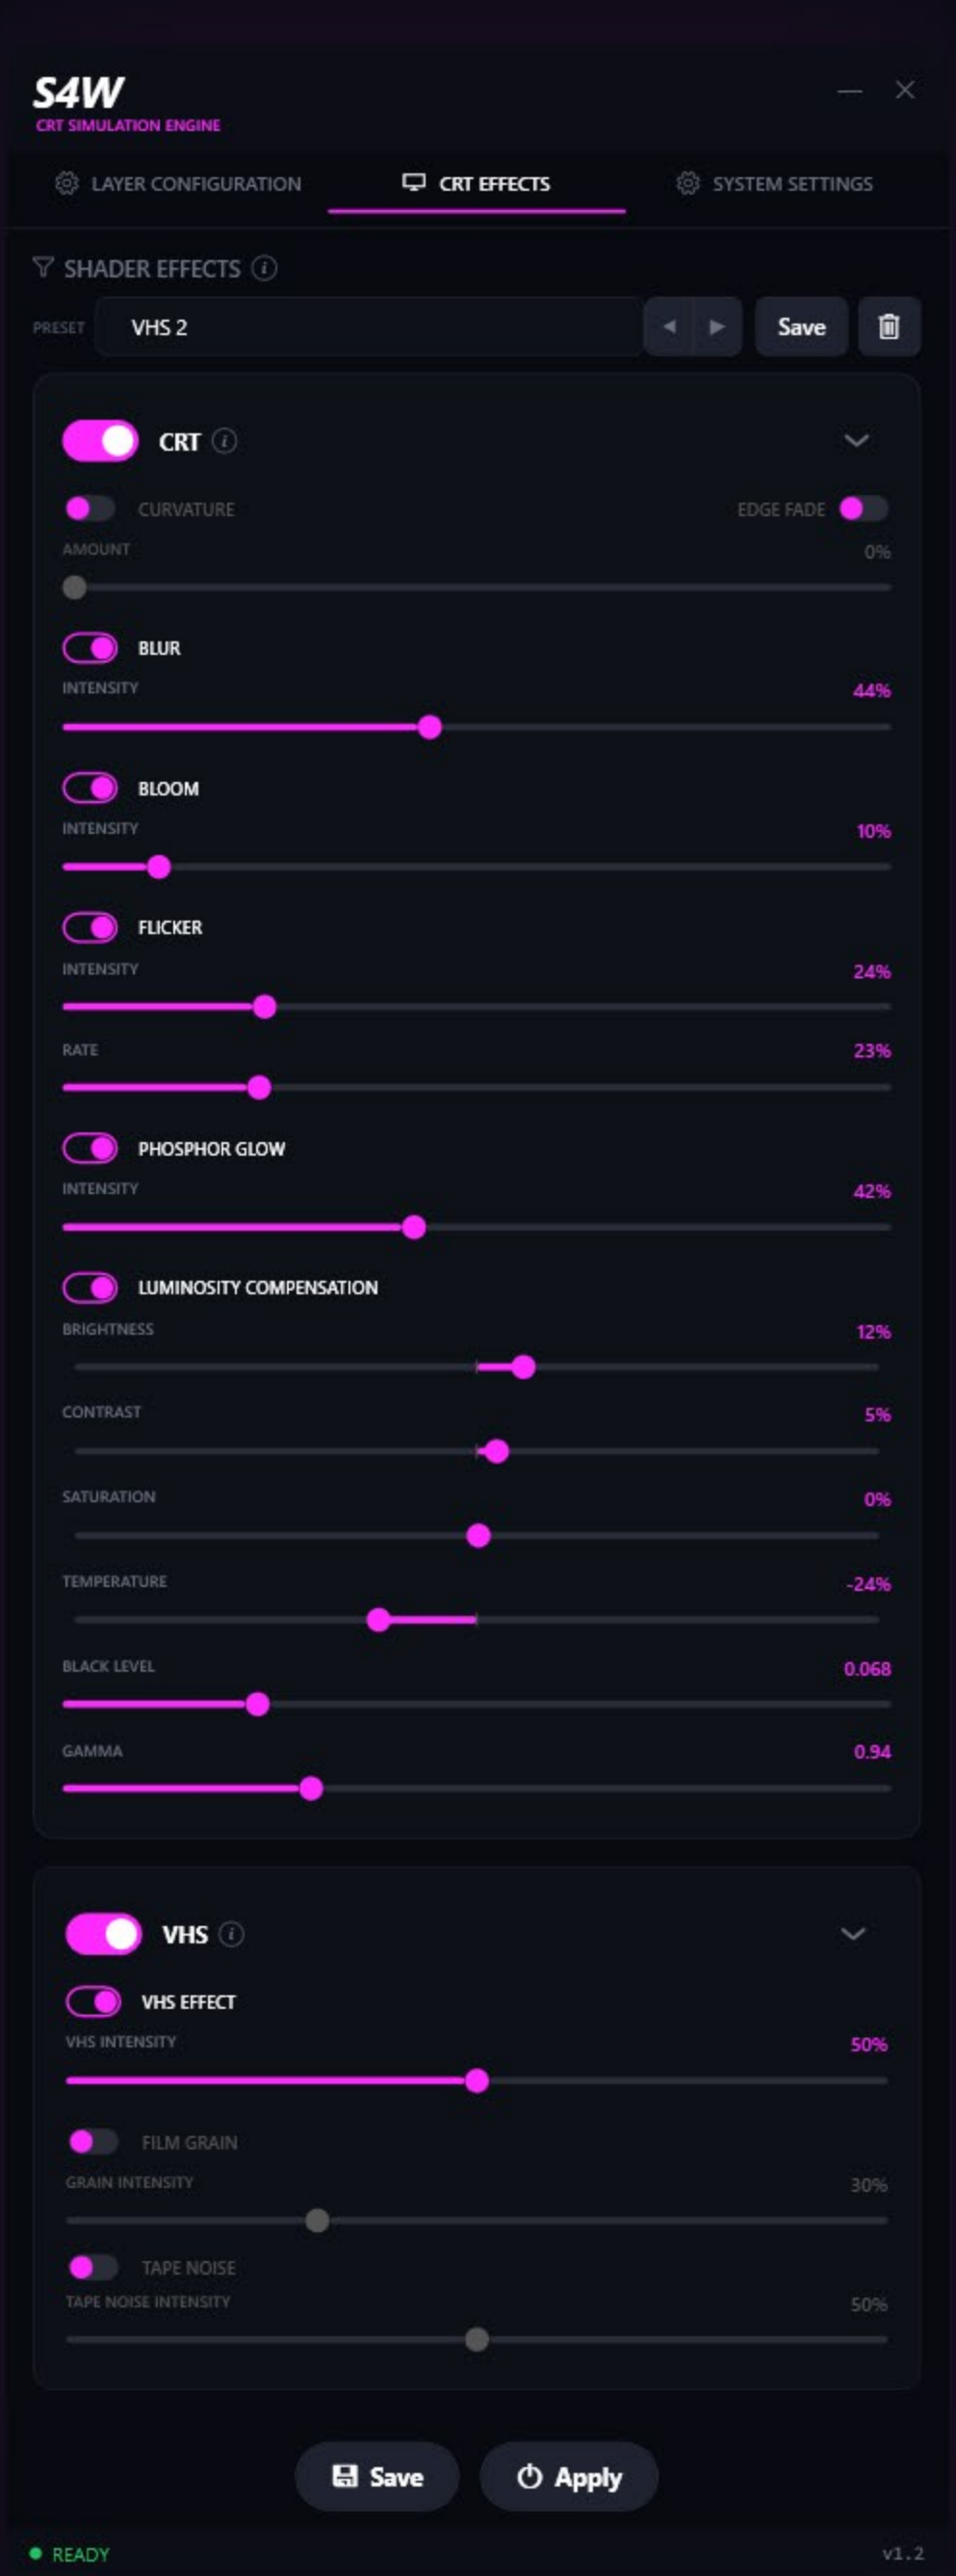

MULTI - SYSTEM EMULATOR

Use this only with Multi-system Emulators (e.g., higan, Ares) Enter a system name. Click **Set** button, then choose between: Create new folder : creates a subfolder named after the system. or Use existing folder to links an existing ROM directory in your PC. Be sure to click **Scan** button to index all ROMs in the folder. S4W will automatically load this profile when the emulator launches with a matching ROM title.

SAVE ANY CHANGE

Be sure to hit **Save** after any change. Use **Apply** to toggle effects on or off at any time Note that S4W automatically loads your settings when it detects a game or emulator launching, so you don't need to hit **Apply** every time...

CRT EFFECTS

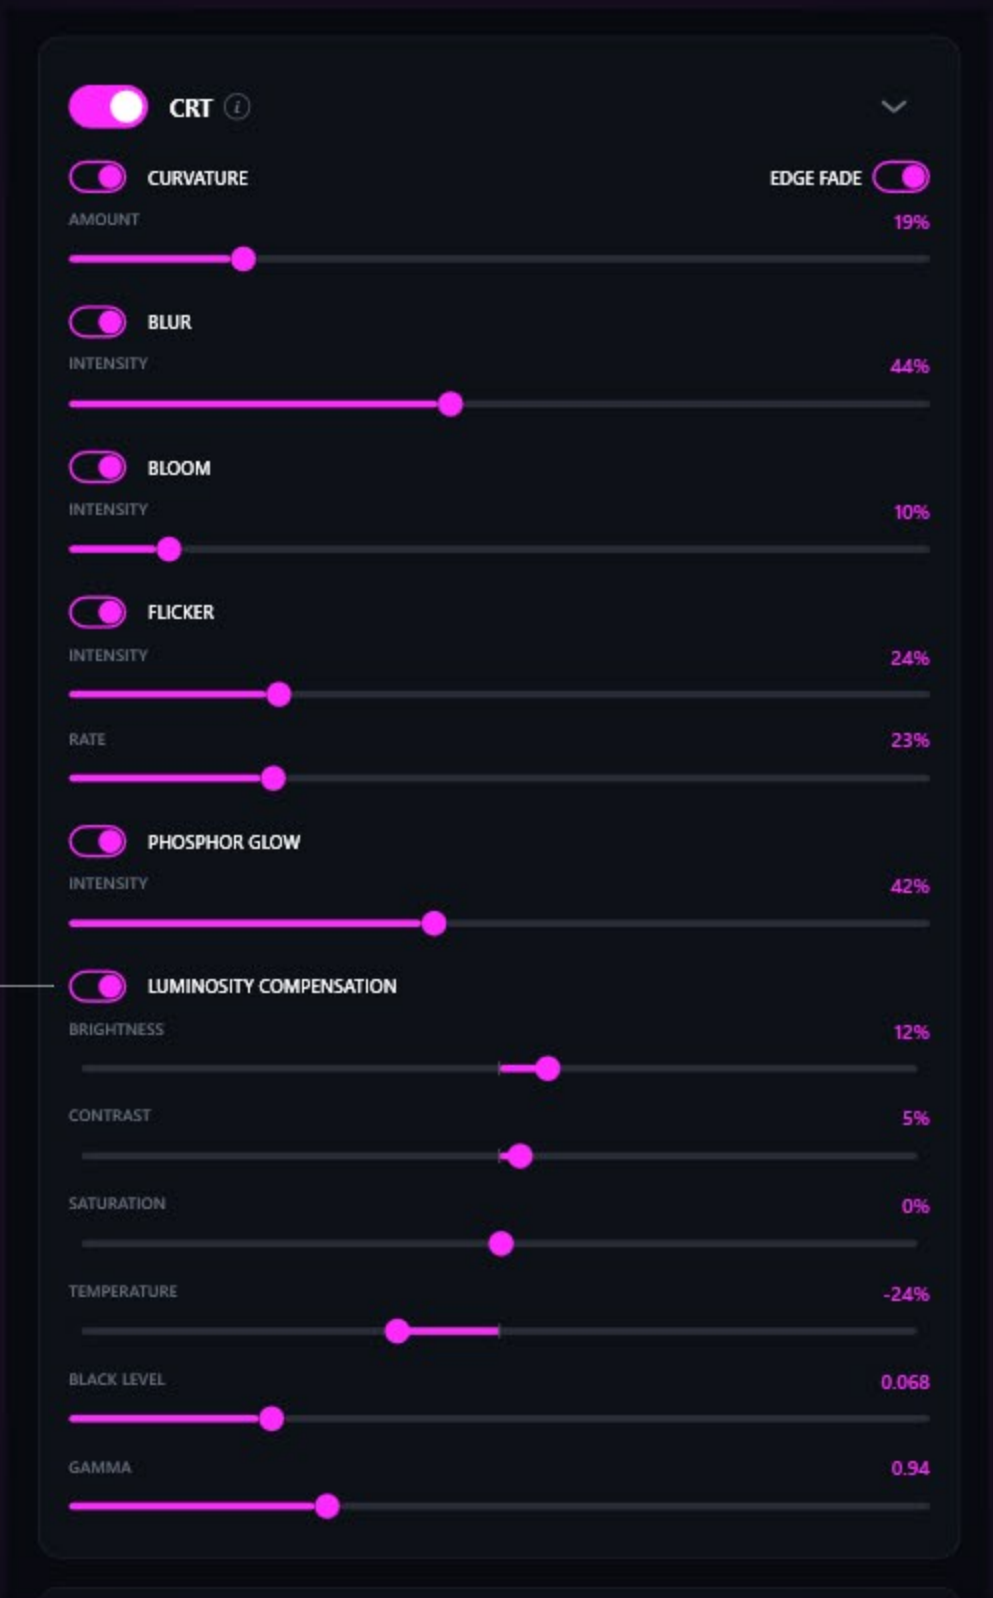

SAVE PRESETS

Once you've dialed in your effects, type a name in the Preset field and hit **Save** to store your settings. Use the **arrows** to cycle through your saved presets and apply them instantly.

Note that CRT effects are not available for the Desktop profile. Switch to a game or emulator profile to use them.

LUMINOSITY COMPENSATION

Luminosity compensation overall brightness, colors, gamma, color saturation and black level after all effects are applied. Since scanlines tend to darken the overall image, don't hesitate to use these Luma sliders to bring it back to life. The Phosphor Glow and Bloom effects can also help bring back some luminosity and depth to the picture.

CRT EFFECTS

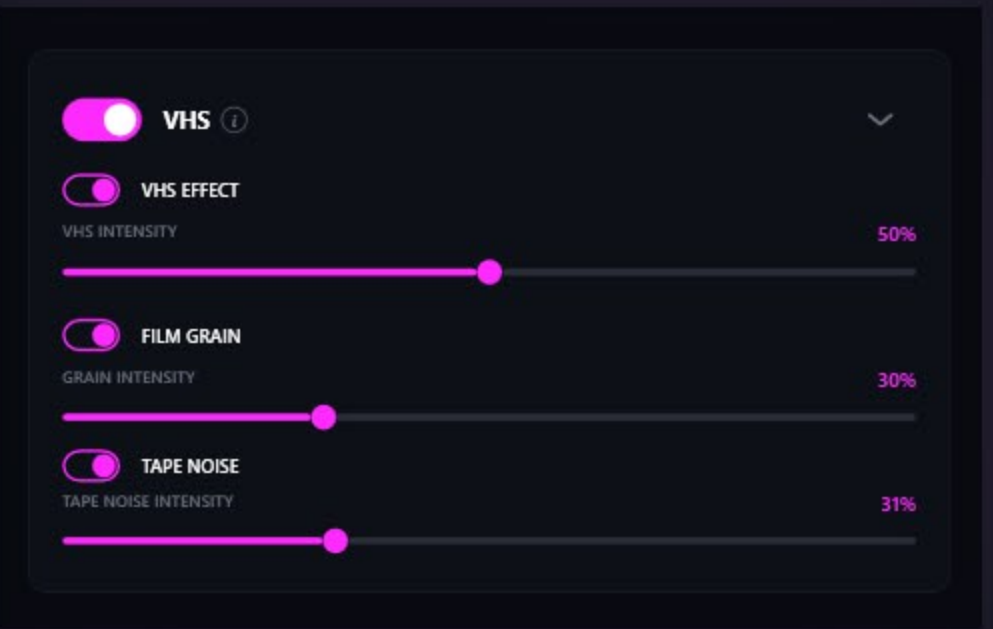

All effects are dynamic and adjustable in real time,

- Curvature** : bends the screen like a CRT tube.
- Edge Fade** : adds a progressive vignette around the screen edges with rounded corners.
- Blur** : softens pixels to mimic natural CRT blur.
- Bloom** : adds a light halo around bright areas.
- Flicker** : simulates CRT refresh rate flickering.
- Phosphor Glow** : creates phosphor persistence with a pixel light trail.
- Luminosity compensation** : overall brightness, colors, gamma, color saturation and black level after all effects are applied.

VHS EFFECTS

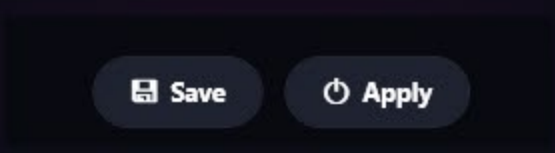

The VHS section groups three effects, each with its own toggle and intensity slider.

- VHS Effect** : simulates analog videotape degradation: scanline jitter, scrolling luma noise, NTSC dot crawl on chroma edges, head-switching artifact at the bottom and subtle desaturation with warm shadow toning.
- Film Grain** : adds cinematic luminance noise, stronger in shadows for a realistic look.
- Tape Noise** : simulates the crackling and static noise of an old worn-out tape.

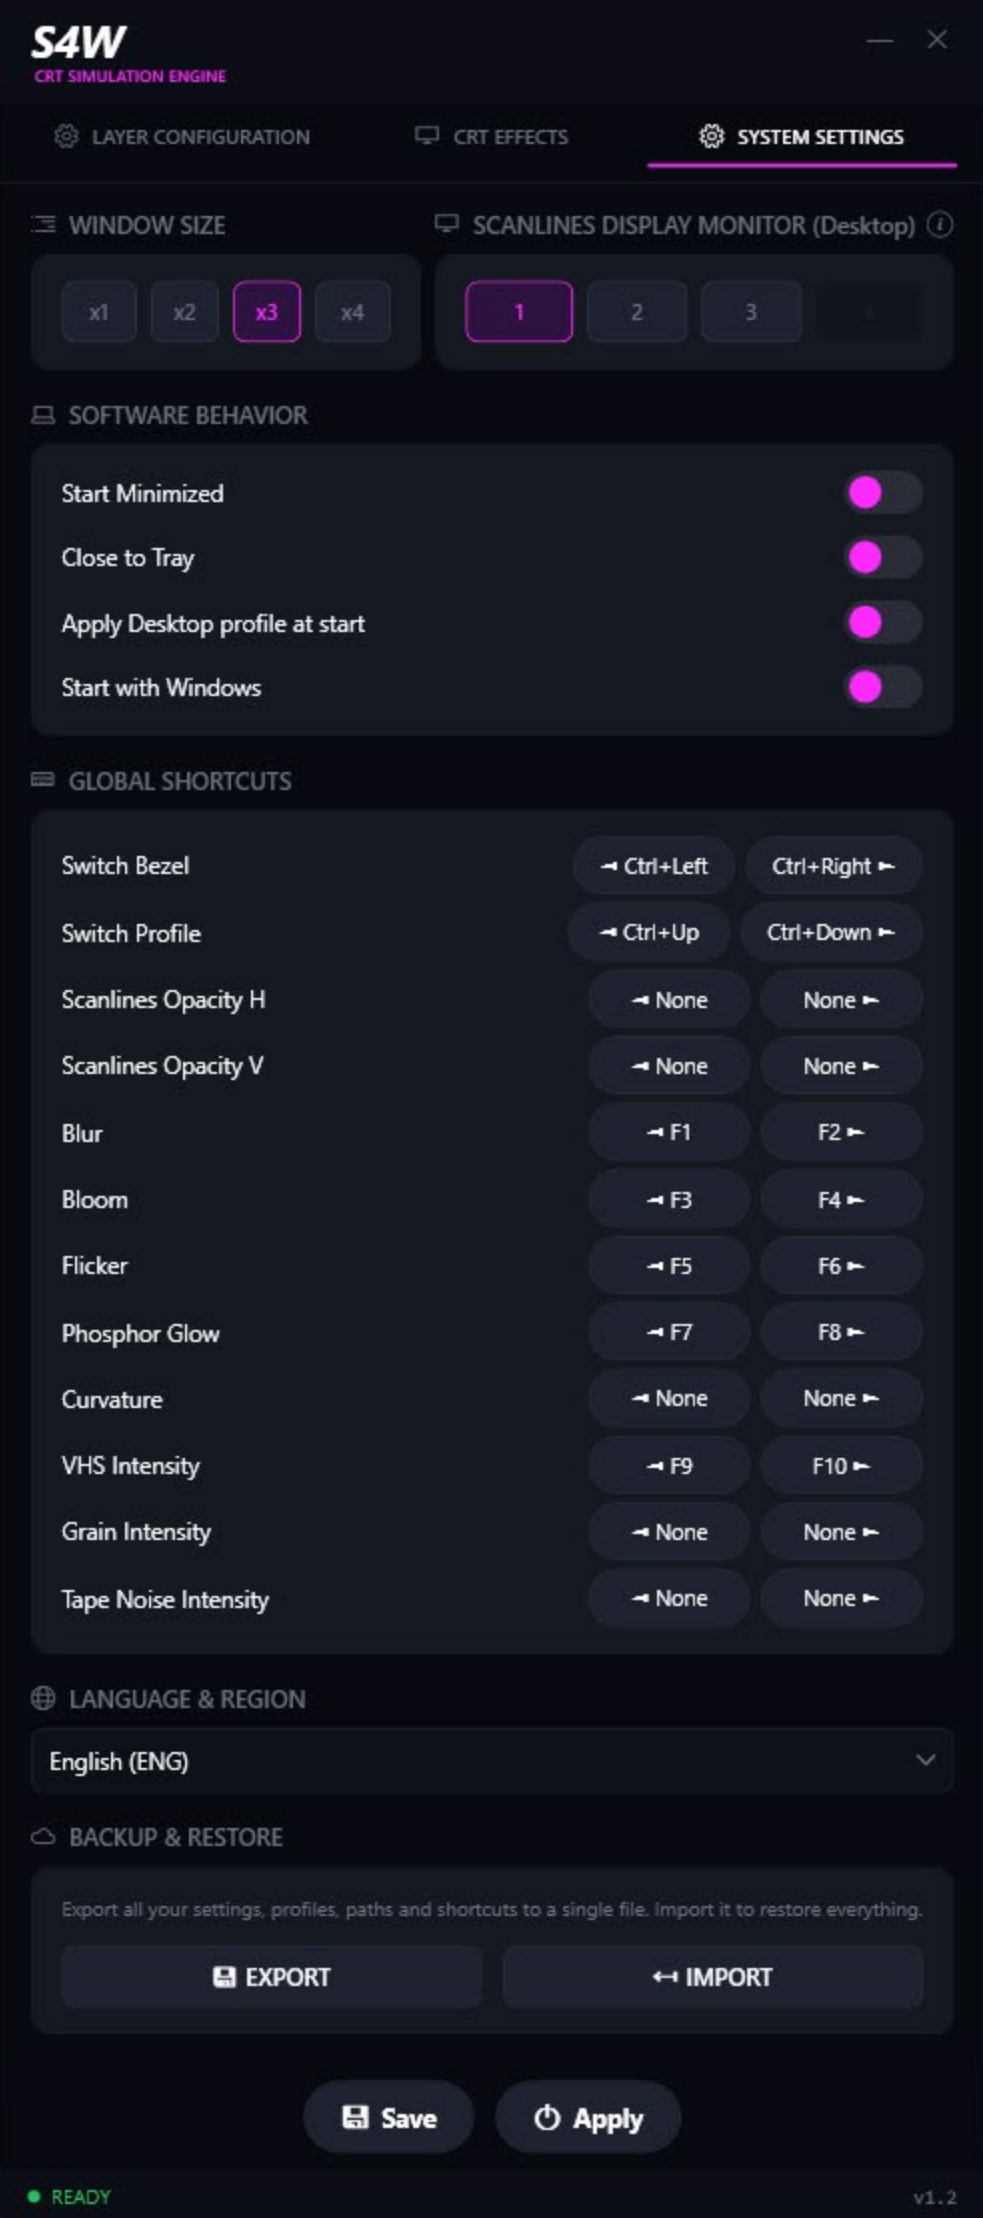

SAVE ANY CHANGE

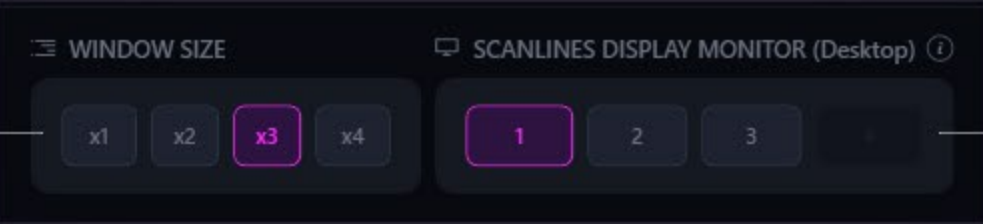

Be sure to hit **Save** after any change. Use **Apply** to toggle effects on or off at any time. Note that S4W automatically loads your settings when it detects a game or emulator launching, so you don't need to hit Apply every time...

SYSTEM SETTINGS

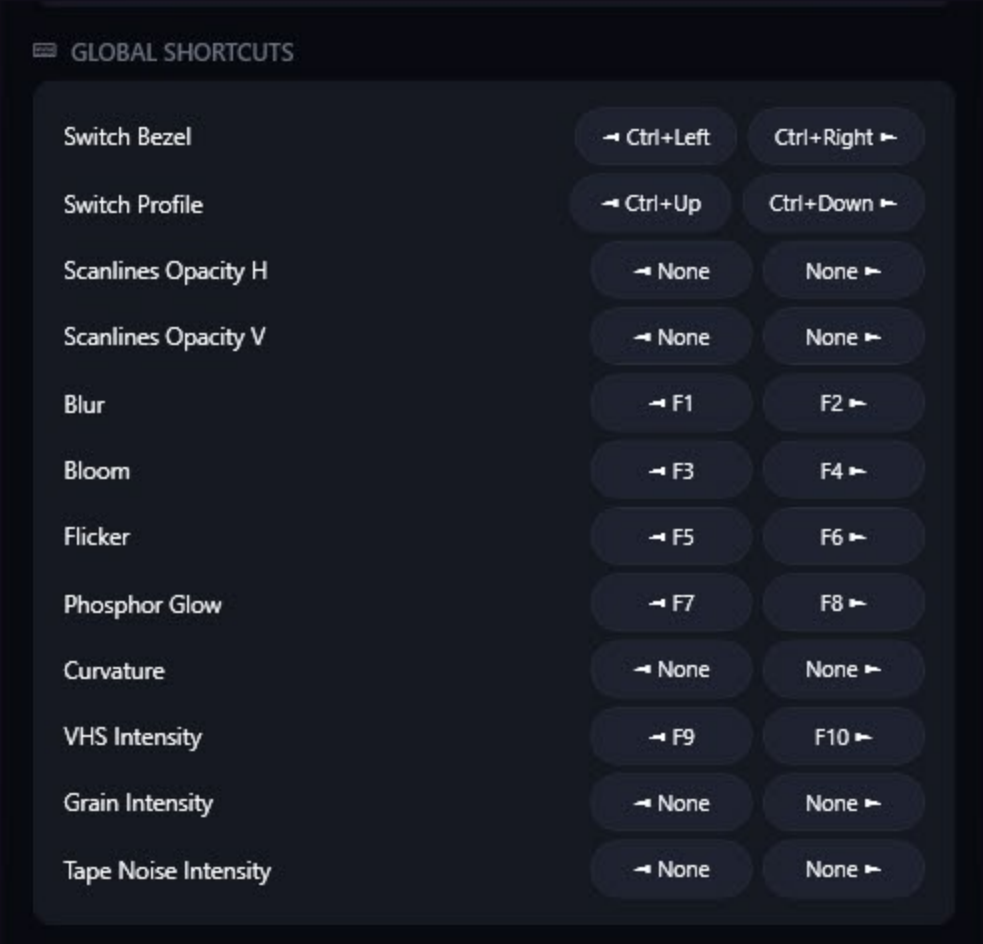

GUI SIZE

DISPLAY SCANLINES MONITOR

Active only for the Desktop profile : selects wich monitor where scanlines are displayed.
When a profile is linked to a game or emulator, S4W uses a direct injection system.
Scanlines are applied inside the game or emulator process itself, no monitor selection needed.

Desktop profile works differently, it uses a separate overlay system and is reserved for those who want to display scanlines directly over Windows. For example on top of a browser, a frontend, YouTube, or any other application that isn't a game.

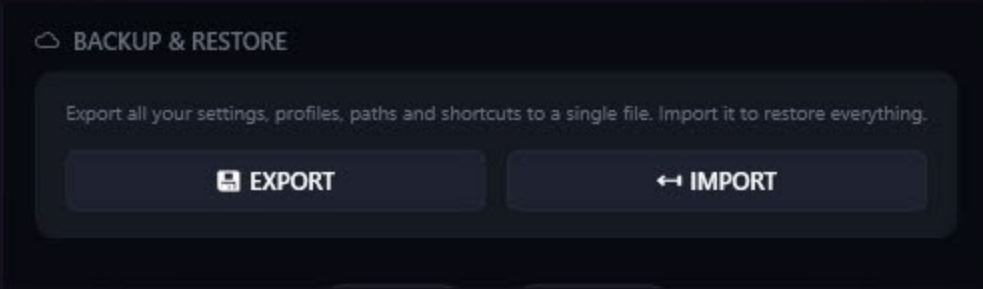

GLOBAL SHORTCUTS

Bind it !
Click any button to assign a keyboard shortcut to its action.
Simply press the desired key combination and it will be bound instantly. Shortcuts let you control S4W without ever opening the interface, toggle effects, switch presets, cycle bezels and more...
All on the fly while playing.

LANGUAGES AND REGIONS

Choose your language
S4W is available in English, French, German, Italian, Spanish and Portuguese (BR).

BACKUP AND RESTORE

Export all your profiles, CRT and VHS effect settings, paths and shortcuts into a single file.
Import it at any time to restore everything instantly without having to start from scratch.

FEEDBACK AND SUPPORT

Help the project and report any bug, suggest improvements, or share which games work or don't work on my Discord server in the #report channel.
Every game I've tested works perfectly, but if you happen to run into one that doesn't, I'll do my best to fix it.

If you enjoy my work and want to support the project, you're welcome to buy me a coffee via the Itch.io page, it means a lot and helps keep the project going.
